

Specifications

Hydraulic Lattice Boom Crawler Crane

LS-218H

100-Ton (90 metric ton)

General dimensions	Feet	meters
Basic boom length	40' 0"	12.20
Overall width side frames extended - 36" (.91 m) track shoes	16' 5"	5.00
Overall width side frames retracted - 36" (.91 m) track shoes	12' 0"	3.66
Minimum ground clearance	21"	0.53

General dimensions	Feet	meters
Ground clearance - ctwt. "A"	4' 7-1/8"	1.40
Ground clearance - ctwt. "AB"	4' 7-1/8"	1.40
Overall width of counterweight	11' 1-3/8"	3.40
Tailswing of counterweight "A"	15' 7-3/8"	4.76
Tailswing of counterweight "AB"	16' 4-7/8"	5.00
Overall width less catwalks	11' 2"	3.40
Overall height for transport, gantry lowered	11' 2"	3.40

LS-218H Machine Transport Weights - approximate

Assembly Weight - as shown
117,560 lbs. (53 325 kg)

Tread Member w/36" (.91m) Shoes
23,800 lbs. (10 796 kg) Each

Upper & Carbody Shipping Weight
69,930 lbs. (31 720 kg)

20' (6.10m) Basic Jib Assembly
1,340 lbs. (608 kg) Tube Jib

20' (6.10m) Peak Section
3,240 lbs. (1 470 kg) Tube Boom
3,090 lbs. (1 402 kg) Angle Boom

20' (6.10m) Base Section
2,170 lbs. (984 kg) Tube Boom
2,360 lbs. (1 070 kg) Angle Boom

Optional Boom Sections	Weight	Cross Section Size
10' (3.05 m) tube boom extension	770 lbs. (349 kg)	60" (1.52 m) wide x 50" (1.27 m) deep
20' (6.10 m) tube boom extension	1,270 lbs. (576 kg)	60" (1.52 m) wide x 50" (1.27 m) deep
30' (9.14 m) tube boom extension	1,750 lbs. (794 kg)	60" (1.52 m) wide x 50" (1.27 m) deep
10' (3.05 m) angle boom extension	1,040 lbs. (472 kg)	48" (1.22 m) wide x 48" (1.22 m) deep
20' (6.10 m) angle boom extension	1,680 lbs. (762 kg)	48" (1.22 m) wide x 48" (1.22 m) deep
30' (9.14 m) angle boom extension	2,400 lbs. (1 089 kg)	48" (1.22 m) wide x 48" (1.22 m) deep

Machine Working Weight - approximate

Complete basic machine with Mitsubishi 6D24-TEB diesel engine, turntable bearing, hydraulic independent swing and travel, 36" (0.91 m) track shoes, main operating drums and boomhoist, 40' (12.19 m) tubular boom w/live mast, no bucket or hook block but with 900' (274.3 m) of 1" (25 mm) dia. hoist rope.

With 46,700 lb. (21 183 kg) counterweight "AB"

169,650 lbs. (76 953 kg)

Performance Specifications - Wire rope and rope drum data

LS-218H Load Hoisting Performance

Available line speed and line pull - based on Mitsubishi 6D24-TEB at 2,000 rpm full load speed.

Line pulls are not based on wire rope strength. See wire rope chart for maximum permissible single part of line working loads.

Rope Layer	21-1/2" (.55 m) Front or Rear Drum					12-3/4" (.32 m) Third Drum - Front Mounted

Wire rope: size, type and working strength

Wire rope application	Size: diameter		Type	Maximum permissible load	
	inches	<i>mm</i>		pounds	<i>kilograms</i>
Main Hoist	1	25	N	29,500	13 381
Auxiliary Hoist	1	25	N	29,500	13 381
Boomhoist	3/4	19	W	11,700	5 307
Third Drum	5/8	16	RB	12,900	5 851
Boom Pendants	1-3/8	35	N	n/a	n/a
Jib Pendants	3/4	19	N	n/a	n/a

Wire rope: types available

- Type "RB" – 18 x 19 rotation resistance, extra extra improved plow steel, preformed, right lay, regular lay, swaged.
- Type "N" – 6 X 25 (6 X 19 class), filler wire, extra improved plow steel, preformed, independent wire rope center, right lay, regular lay.
- Type "W" – 6 X 26 (6 X 19 class), extra improved plow steel, preformed, independent wire rope center, right lay, alternate lay.

Crawler Lower

Lower frame

All welded, box construction, precision machined; 13' 5" (4.08 m) extended or 9' 0" (2.74 m) retracted gauge X 21' 3" (6.48 m) track length.

Turntable bearing

Outer race is bolted to upper frame, inner race with internal ring gear is bolted to lower frame.

Crawler side frames

All welded, precision machined and removable; hydraulically extended or retracted by a cylinder mounted inside the lower frame.

Track drive sprockets and idler wheels

Cast steel, heat treated; sealed for lifetime lubrication.

Track rollers

Nine per side. Tractor type, oil filled for lifetime lubrication.

Track carrier rollers

Three tractor type rollers mounted on top of each crawler side frame. Oil filled for lifetime lubrication.

Tracks

Heat treated, self cleaning, multiple hinged track shoes joined by one piece full floating pins; 46 shoes per side frame; 36" (.91 m) wide.

Track tension adjustment - Track adjusted by hydraulic cylinders at the idler block.

Tracks automatically release during excessive tension condition.

Independent travel & steering

Axial piston motor with reduction gear is located at inner drive end of each crawler side frame. Each track is driven simultaneously or individually for straight-line, gradual turn, or pivot turn. The tracks can be counterrotated for spin turns.

Brakes - Spring applied, hydraulically released multiple disc brakes are applied automatically when the control lever is in the neutral position.

Travel speed - 0.8 mph (1.3 km/h)

Gradeability - 30%

Jacking system

Four ground controlled, power hydraulic jacks, mounted on the lower carbody frame, raise the machine to facilitate removal or installation of the crawler sideframes.

Note: Counterweights must be removed prior to machine jacking.

Ground bearing pressure

Track shoes		Ground contact areas		Ground bearing pressure	
inches	meters	in ²	cm ²	psi	kg/cm ²
36	0.91	16,300	105,180	10.41	.73

Revolving Upperstructure

Frame

All-welded, precision machined unit.

Fuel tank

119 gallon (450 L) capacity.

Power transmission

All functions hydraulically powered allowing positive, precise control, with independent or simultaneous operation of all crane functions.

Engine Specifications

Mitsubishi 6D24-TEB with oil filter, oil cooler, air cleaner, fuel filter, water separator, hour meter, tachometer and electrical shutdown.

Number of cylinders	6
Bore and stroke - inch - (mm)	5.12" X 5.91" (130 X 150)
Piston displacement - (in ³) - (cm ³)	729 (11 945)
Engine rpm at full load speed	2,000
Net engine horsepower at full load speed, (HP)	263 (196 kw)
Peak torque - foot pounds - (joule)	746 1 011
Peak torque - rpm	1,400
Electrical system	24 volt
Batteries	2 - 12 volt

Hydraulic System

Hydraulic pumps

Two variable displacement piston pumps operating at 4,000 psi (281 kg/cm^2) power travel, main drum, auxiliary drum, third drum and boomhoist functions. One fixed displacement gear pump operating at 3,000 psi (211 kg/cm^2) powers swing. One fixed displacement gear pump operating at 3,600 psi (250 kg/cm^2) powers jacking cylinders or swing. One fixed displacement gear pump operating at 1,200 psi (85 kg/cm^2) powers pilot control system, clutches, brakes and pump controls.

Hydraulic reservoir

79 US gallon (300 L), equipped with sight level gauge.

Relief valves

Each function is equipped with relief valves to protect the circuit from overload or shock.

Brake valves

Travel circuit is provided with brake valves for all terrain travel capability.

Hydraulic filtration

Ten micron, full flow line filter furnished in control circuit. All oil is filtered prior to return to sump tank.

Hydraulic motors

Main, auxiliary and third hoist drums, boom hoist, swing and travel are powered by axial piston motors.

Counterbalance valves

Hoist motors are equipped with counterbalance valves to provide positive load lowering and prevent accidental load drop when hydraulic power is suddenly reduced.

Principal Operating Functions

Control system

Remote controlled hydraulic servo for main drum, auxiliary drum, third drum and travel. Mechanical linkage controls swing. Function speed is proportional to lever movement. Levers are adjustable for operator comfort.

Load hoisting and lowering

Main and auxiliary hoist drums are driven by individual axial piston motors and reduction gearing. Load hoisting or lowering is provided by actuating or reversing a hydraulic motor. Smooth, precise, power load lowering is attained with automatic hydraulic brake. The control lever provides two speeds for hoisting and lowering. Hoisting or lowering speeds are proportional to lever movement.

Freefall - The incorporation of power hydraulic controlled, two shoe clutches allows freefall operation of the main and auxiliary hoist drums for high cycle crane and duty cycle application. Mode selection switch on control panel allows operator to select the most productive operation mode.

Load hoist drums

Main (front) and auxiliary (rear) hoist drums are 21-1/2" (.55 m) root diameter grooved for 1" (25 mm) wire rope and mounted on anti-friction bearings.

Third operating drum

Optional; Pinned to front of main frame, 12-3/4" (.32 m) root diameter. Hydraulic winch type power up and down standard.

Optional; Same as third drum above but with controlled free spooling for use in pile driving applications.

Drum clutches

Speed-o-Matic® power hydraulic two-shoe clutches; internal expanding, lined shoes. Clutch spiders are splined to shafts; clutch drums are integral with hoist drums.

Load hoist clutches - Front and rear main drums - clutch drums 37" (.94 m) diameter, 5-1/2" (140 mm) face width. Swept area is 638 square inches (4 116 cm²).

Drum brakes

External contracting band type; operated by foot pedal equipped with a locking latch. Operator may select automatic brake mode (spring applied, hydraulically released), which will apply brakes when the hoist control lever is in the neutral position.

Drum rotation indicators

Standard for front and rear drums. Audible-type indicators.

Drum locking pawl

Standard for front and rear drums; electrically actuated and prevents drum rotation in a lowering direction.

Load indicator

Standard: PAT EI-65 load indicator for main drum. See Auxiliary Equipment on page 8 for description and other available load indicators.

Anti two-block system

Standard: A switch mounted on the boom peak activates a buzzer to warn the operator of a two-block condition and simultaneously disengages hoist function while applying the hoist brakes.

■ Swing system

Independent, hydraulic swing is driven by two axial piston motors through a gear reduction system.

Swing brake - Spring applied, hydraulically released; controlled by button on swing control lever.

Swing lock - Mechanically controlled, drop pin.

Swing speed - Two-speed, 1.3 / 2.5 rpm

■ Boomhoist/lowering system

Independent, hydraulic boomhoist is driven by an axial piston motor through a gear reduction system. Boom hoisting or lowering is performed by actuating or reversing the motor.

■ Boomhoist drum

Single grooved lagging 16-1/2" (.42 m) root diameter.

■ Boomhoist drum locking pawl

Electrically operated.

■ Boomhoist brake

Spring applied, hydraulically released, multiple disc type brake. Brake is automatically applied when control lever is in neutral position.

Boomhoist limiting device - Restricts hoisting boom beyond recommended minimum radius.

■ Electrical system

24 volt negative ground system, with two 12-volt batteries. Standard lighting system includes: two 70 watt headlights mounted on machine front and one interior cab light.

■ Operator's cab

Full vision, modular compartment with safety glass panels. The completely independent cab is insulated against noise and vibration. Sliding operator's door, swing up roof window. Standard equipment includes: heater, defroster, windshield wiper, dry chemical fire extinguisher, sun visor, bubble-type level, fuel gauge, tachometer, hydraulic temperature gauge, engine oil pressure gauge, coolant temperature gauge, service monitor system, and EI-65 load indicator system.

■ Machinery cab

Hinged doors (four on right side, three on left side) for machinery access. Equipped with rooftop access ladder and electric warning horn.

■ Catwalks

Standard on both sides. Catwalks fold up for reduced travel width.

■ Gantry

Retractable high gantry is power lowered to reduce height for transport. May also be used for power raising or lowering of counterweight.

■ Gantry bail

Pinned to retractable high gantry. Four sheaves are provided for 10-part boomhoist wire rope reeving. Sheaves mounted on anti-friction bearings, sealed for lifetime lubrication.

■ Counterweight

Removable, held in position by bolts. Standard counterweight lowering system consists of retractable high gantry and hydraulic cylinders.

Counterweight "A" - 24,200 lbs. (10 977 kg)

Counterweight "B" - optional - 22,500 lbs. (10 206 kg) Required for maximum lift crane capacities.

Booms and Jibs

■ Booms

Angle - Two piece basic boom 40' (12.19 m) long with open throat top section. Boom 48" (1.22 m) wide, 48" (1.22 m) deep at centerline of connections. Main chord angles are high strength, low alloy steel, 4" x 4" x 3/8" (101.6 mm x 101.6 mm x 9.53 mm).

Base section - 20' (6.10 m) long. Boom feet on 61" (1.55 m) centers. Lifting lugs on top side of base section to attach carrying links for boom assembly.

Boom extensions - Available in 10', 20', and 30' (3.05 m, 6.10 m, and 9.14 m) lengths with appropriate length pendants.

Boom connections - In-line tapered pin.

Boom top section - Open throat, 20' (6.10 m) long.

Boompoint machinery - Four 18" (.46 m) root diameter head sheaves mounted on anti-friction bearings with rope and sheave guards standard for lift crane use.

Tubular - Two piece basic boom 40' (12.19 m) long with open throat top section. Boom 60" (1.52 m) wide, 50" (1.27 m) deep at centerline of connections. Alloy steel, round tubular chords 3" (76 mm) outside diameter.

Base section - 20' (6.10 m) long. Boomfeet on 61" (1.55 m) centers. Lifting lugs on top side of base section to attach carrying links for boom assembly.

Boom extensions - "H" wall chord. Available in 10', 20', and 30' (3.05 m, 6.10 m, and 9.14 m) lengths with appropriate length pendants.

Boom connections - In-line tapered pins.

Boom top section - Open throat; 20' (6.10 m) long.

Boompoint machinery - Five 21" (.53 m) root diameter head sheaves mounted on anti-friction bearings. Rope and sheave guards are standard.

■ Tubular jib

Tubular - basic two-piece 30' (9.14 m) long, 32" (.81 m) wide and 24" (.61 m) deep at connections. Alloy steel tubular chords 2" (51 mm) outside diameter. Offsettable 0, 15, or 30 degrees relative to main boom angle.

Base section - 15' (4.57 m) long.

Jib extensions - available in 15' (4.57 m) lengths with appropriate length pendants.

Jib connections - In-line, tapered pin connections.

Tip section - 15' (4.57 m) long, one 18-1/2" (.47 m) root diameter sheave mounted on anti-friction bearings.

■ Jib mast

11' 6" (3.51 m) high, mounted on jib base section. Two deflector sheaves mounted within mast to guide whipline; mounted on anti-friction bearings. Two equalizer sheaves mounted on top of mast - one for jib frontstay line, one for jib backstay line.

Jib staylines - Front and rear staylines vary in length depending on degree of jib offset from boom center line; backstay lines attached at bottom end of boom top section.

Jib stops - Dual, tubular telescoping type.

■ **Boom stops**

Dual, tubular telescoping type.

■ **Boom live mast**

26' (7.92 m) long rectangular structure which supports boomhoist bridle, boom pendants and midpoint suspension pendants. Boom live mast may be used as a short crane boom for machine assembly or dismantling. Standard with tubular boom attachment; *optional* for angle boom attachment.

■ **Boomhoist bridle and spreader bar**

Serves as connection for boom suspension system. Bridle contains five 12" (.30 m) root diameter sheaves mounted on anti-friction bearings for 10-part boomhoist wire rope reeving. Auxiliary bail may be attached to bridle and contains two 15-7/8" (.40 m) root diameter bronze bushed sheaves to permit reeving wire rope suspension for use of boom live mast as short boom. Spreader bar provides attachment for boom main pendants and boom midpoint suspension pendants.

■ **Deflector rollers**

Deflector rollers deflect main and auxiliary load hoist wire rope over top side of boom. Rollers are mounted on anti-friction bearings. One roller on top section of basic boom and one roller per boom extension is standard for both angle and tube booms.

Auxiliary Equipment

■ **Boom angle indicator**

Pendulum type, mounted on operator's side of boom base section.

■ **Load indicator**

The **standard** PAT EI-65 load indicator for the main drum provides the operator with: main boom length, main boom angle, jib angle, jib length, operating mode, load radius, boom tip height, and anti-two block indicator.

Optional; PAT EI-65 load indicator for auxiliary drum. (Additional line rider required.)

Rated Capacity Limiters (*Optional*)

Optional; PAT DS-350 rated capacity limiter for main and auxiliary drums. (Additional line rider required for auxiliary drum.)

The optional rated capacity limiter system (RCL) provides the same information as the load indicator plus the crane's rated capacity at a particular setup with function kickout. Includes a pre-warning light, audible alarm, and overload light.

■ **Fairlead**

Optional; full revolving type with barrel, sheaves and guide rollers mounted on anti-friction bearings.

■ **Tagline**

Rud-o-Matic® model 648; spring wound, drum-type.
